Please send a request to autobuild@suse.de to sync binaries and sources for SUSE:SLE sources and binaries.

Blacklist for packages that need to be skipped from sync can be found here https://en.opensuse.org/Portal:Leap:Jump/OBS/Blacklist

This should ideally be send at least day ahead of the SLE-X-SPY Beta1 date.

Hello Autobuild team,

could you please enable sync of sources and binaries for SUSE:SLE-X-SPY:GA to OBS right after the Beta1 which is expected happen on DD.MM.YYYY. We need them as openSUSE Leap is based on these binaries.

Here is a list of packages that should remain blacklisted: (please describe changes if any)
https://en.opensuse.org/Portal:Leap:Jump/OBS/Blacklist

Thank you

---

Email sent to autobuild team

Hello Autobuild team,

SLE 15 SP3 Beta1 is scheduled for Nov 20 2021, which is this Friday. We have an agreement with SLE PM that sources and binaries can be published with Beta1.

https://confluence.suse.com/display/SUSELinuxEnterpriseServer15SP3/Schedule

May I ask you to turn-on sync of SLE 15 SP3 sources/binaries to OBS on Friday after 15:00 so we can use weekend
d for syncing?

Issue is tracked by Release team here https://progress.opensuse.org/issues/76219

Thank you
