# openSUSE Leap 15.3 - action #76393

## merge back maintenance updates

2020-10-28 14:22 - Ikocman

Status:	Resolved	Start date:	2020-10-28
Priority:	Normal	Due date:	2021-04-21
Assignee:	lkocman	% Done:	100%
Category:		Estimated time:	0.00 hour
Target version:	RC		

#### Description

maintenance updates from the update project need to be merged back into the main repo

- use osc checkupdate (https://github.com/coolo/factory-auto/osc-plugin-checkupdate.py) to find updated packages
- copy them back using 'osc copypac -e openSUSE:13.2:Update openSUSE:13.2 -m "Update to match Update channel update#."; On purpose do it by hand without automation to avoid screwups
- $\bullet$  adjust the release number to be higher than in the update repo using FIXME $\pi$
- remove updates from the update repo by using "osc killupdate NUMBER"

[1] adjust the release number by checking the state of the package 'osc getbinaries openSUSE:13.2:Update . standard x86\_64' and then writting higher revision to .spec file. To submit this update to repository just use 'osc ci --noservice -m "Add revision to ensure new-enough over Update channel."

There should be a way to do this by means of obs

#### History

## #1 - 2021-04-20 13:48 - Ikocman

- Assignee set to Ikocman

### #2 - 2021-04-20 13:49 - Ikocman

- Due date set to 2021-04-21

### #3 - 2021-04-20 13:50 - Ikocman

- Status changed from New to In Progress

https://github.com/coolo/factory-auto/pull/57

However the tool can't be used any more as it is since we're not using 00Meta. We can still use osc meta for the origin of packages though.

#### #4 - 2021-04-28 15:07 - Ikocman

- Status changed from In Progress to Resolved
- % Done changed from 0 to 100

From Marcus:

We have not released any feature updates into 15.3:Update at this time.

(Only hello and rpmlint-mini are there as testupdates without source changes.)

The task can be marked done.

ciao, Marcus
