

openQA Project - action #77215

In jobs API data reference a parent job group name as well

2020-11-09 14:12 - okurz

Status: Resolved	Start date: 2020-11-09
Priority: Low	Due date: 2020-11-13
Assignee: Xiaojing_liu	% Done: 0%
Category: Feature requests	Estimated time: 0.00 hour
Target version: Ready	
Difficulty:	
Description	
Motivation	
<p>The jobs API data shows both the group_id as well as group (name) for a job but not the parent job group. For example</p> <pre>openqa-cli api --o3 jobs/1464990 jq .</pre> <p>yields:</p> <pre>{ "job": { ... "group": "Development Tumbleweed", "group_id": 38, "has_parents": 0, "id": 1464990, "name": "opensuse-Tumbleweed-DVD-x86_64-Build20201108-create_hdd_textmode_ext4@uefi",</pre> <p>for a job within the job group "Development Tumbleweed" which is below a parent job group "Development". Another example is https://gitlab.suse.de/qa-maintenance/openQABot/-/blob/master/openqabot/utls.py#L127 looking into the name of a job group if it starts with "Test" to call it a "Development" job group and hence ignore for QAM approval. This caused problems for a job within the job group "QAM HA-SAP" which is below the parent job group "Development" but not having "Development" or "Test" in the name itself.</p>	
Acceptance criteria	
<ul style="list-style-type: none">• AC1: The parent job group name is available from jobs API data	
Suggestions	
<ul style="list-style-type: none">• Just add a field <i>parent_group</i> if not-null and learn quickly that it is never as easy like that ;)• Optional: Also include <i>parent_group_id</i>

pr: <https://github.com/os-autoinst/openQA/pull/3543>

#4 - 2020-11-12 13:37 - okurz

- Status changed from Workable to In Progress

#5 - 2020-11-13 19:28 - okurz

PR merged. As soon as this is live, e.g. on o3, we can provide a suggestion for <https://gitlab.suse.de/qa-maintenance/openQABot/-/blob/master/openqabot/utlis.py#L127>, e.g. in form of a ticket.

#6 - 2020-11-16 06:57 - Xiaojing_liu

- Status changed from In Progress to Feedback

The pr has been merged and deployed on o3.
The test result shows that:

```
openqa-cli api --o3 jobs/1470855 --pretty
{
  "job" : {
    ... ..
    "group" : "Development Tumbleweed",
    "group_id" : 38,
    "has_parents" : 0,
    "id" : 1470855,
    "name" : "opensuse-Tumbleweed-DVD-x86_64-Build20201113-create_hdd_textmode_ext4@uefi",
    "parent_group" : "Development",
    "parent_group_id" : 6,
```

Create a ticket <https://progress.opensuse.org/issues/77956> to give a suggestion that using the parent group name.
