In #52451 I have created https://bugzilla.opensuse.org/show_bug.cgi?id=1137520 with title openQA test fails in qemu with "corrupted size vs. prev_size: 0x000056322a96f680" or "malloc(): smallbin double linked list corrupted: 0x0000557b4ea753d0". The bug is still open and not being worked on since more than a year. I doubt this will be done within foreseeable future. But we have the retry in place. Originally I thought we should not have closed tickets with auto_review in the subject line but I think it's working good enough for now and we still have the ticket in case we see "too many incompletes" of any kind.
