osd: Some job group obsolete definitions should be removed

2020-11-20 03:42 - tonyyuan

Status:	New	Start date:	2020-11-20
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:		Estimated time:	0.00 hour
Target version:	future		
Description			
<pre>/usr/bin/openqa-client --json-output --host https://openqa.suse.de job_groups 2>/dev/null jq -r '[] select(.name test("Maintenance: SLE .*Updates")) .id toString)+" "+.name" sort -r -k4</pre>			
The above command outputs the following job group definition:			
346 Maintenance: SLE 15 SP2 Updates			
308 Maintenance: SLE 15 SP2 Updates			
232 Maintenance: SLE 15 SP1 Updates			
165 Maintenance: SLE 15 GA Updates			
280 Maintenance: SLE 12 SP5 Updates			
218 Maintenance: SLE 12 SP4 Updates			
108 Maintenance: SLE 12 SP3 Updates			
54 Maintenance: SLE 12 SP2 Updates			
34 Maintenance: SLE 12 SP1 Updates			
35 Maintenance: SLE 12 GA Updates			
"34 Maintenance: SLE 12 SP1 Updates" and "35 Maintenance: SLE 12 GA Updates" are obsolete. They should be removed from database.			
346 and 308 have the same group name which causes confusion.			

History

#1 - 2020-11-20 09:54 - okurz

- Subject changed from *Some job group obsolete definitions should be removed* to *osd: Some job group obsolete definitions should be removed*
- Target version set to *future*

ok. I agree that the duplicate names is confusing. It should be possible to rename the job group for any admin.

Any admin with access to the database can remove old job groups but I think some of them could be kept around a bit longer. Also groups like "Development / Maintenance: SLE 15 SP2 Updates" might be used temporarily sometimes when test scenarios that are pulled out from the update validation job groups.
