we should include greek as primary language on the dvd

things to do:
- create a bundle for el
- move firefox's translations from common to others

One more action:
get DVD size back under control

created bundle - awaiting legal review

Subject changed from make greek a first class language to include greek on the dvd

% Done changed from 0 to 40

working on Firefox...

the DVD is 100MB too large now - I suggest to reject it. Too late

firefox will only help little:
found the biggest problems

only missing piece atm: firefox translations will not have greek, but the devel project is already fixed (post beta1)
