History

#1 - 2020-12-22 07:51 - ph03nix

Looking into this, if this is a test issue or if not yet working on 15.3

#2 - 2020-12-22 08:08 - ph03nix

15.3 is currently not included in the test case because there are no builds for it yet. I'm having a look if I can help out.

#3 - 2020-12-22 08:19 - ph03nix

- % Done changed from 0 to 60

15.3 is not yet available in OBS as distribution. Cannot build.

#4 - 2020-12-22 08:21 - ph03nix

Improving the output of the test module to make the source of the test failure more obvious.

#5 - 2020-12-22 08:21 - ph03nix

- Subject changed from test fails in zfs to Improve output of zfs test failure

#6 - 2020-12-22 13:49 - ph03nix

- % Done changed from 60 to 80
- Parent task set to #70981

PR: <https://github.com/os-autoinst/os-autoinst-distri-opensuse/pull/11654>

#7 - 2021-01-05 12:09 - ph03nix

- Status changed from In Progress to Resolved
- % Done changed from 80 to 100

Merged: <https://github.com/os-autoinst/os-autoinst-distri-opensuse/pull/11654>

#8 - 2021-01-20 06:05 - okurz

This is an autogenerated message for openQA integration by the openqa_review script:

This bug is still referenced in a failing openQA test: extra_tests_filesystem
<https://openqa.opensuse.org/tests/1582578>

To prevent further reminder comments one of the following options should be followed:

1. The test scenario is fixed by applying the bug fix to the tested product or the test is adjusted
2. The openQA job group is moved to "Released"
3. The label in the openQA scenario is removed

#9 - 2021-01-20 08:00 - ph03nix

I'm wondering how this test gets scheduled on 15-SP3, when the only place where this is defined is main_common.pm with

```
loadtest "console/zfs" if (is_leap(">=15.1") && is_x86_64 && !is_jeos);
```

IMHO this test should not be executed there.

Edit: My bad. This is Leap, there it is ok.

I make this a softfailure, since it's a known issue that there are no builds yet available. This should not do harm to the other test cases.
