Hi all,

The release team made openSUSE 13.1 RC2 available - help us test it, as we're close to release! See https://news.opensuse.org/?p=16786 for some idea of what's new and what needs extra attention: the live images, secure boot and of course btrfs.

It's all over our mirrors, see software.opensuse.org/developer and get it.

/J

send to project and factory.
