Description

Observation

openQA test in scenario sle-15-SP2-Full-QR-x86_64-gnome_smb@64bit fails in [bootloader](#)

Test suite description

Maintainer: okurz, mgriessmeier

Install gnome using smb and MIRROR_SMB variable available in Server-MINI-ISO flavor (only)

Reproducible

Fails since (at least) Build [376.10](#)

Expected result

See Online-QR's result at: <https://openqa.suse.de/tests/5259405>
This is the first time the test is tried to run on Full images.

Further details

Always latest result in this scenario: [latest](#)

History

#1 - 2021-01-14 09:45 - tjrinki_suse

- Status changed from New to Workable

#2 - 2021-01-14 09:59 - tjrinki_suse

- Description updated

- Assignee deleted (tjrinki_suse)

One missing needle was clear, but it tries to select FTP while it should select HTTP.

- Assignee set to tjrinki_suse

no last good test, who has scheduled this job recently? New job needs to be verified before adding to OSD.

Install source smb, if you can point me to an another installation by using smb, I can check this issue. Sorry, I am not familiar with smb installation,

thanks!

<https://progress.opensuse.org/issues/87707> might be the same issue.

#7 - 2021-01-19 15:57 - tjrinki_suse

One possible "solution" to this problem is to simply unschedule the tests from Full media, we don't necessarily need to run all of them, especially if the installer media type shouldn't affect these tests.

There is no previous test because the Full QU flavor is new altogether, and just tries to execute all tests Online media did.

If the test and the one in 87707 are simply desktop tests, maybe the best course of action is to remove them from the schedule
