[qe-core][sporadic] test fails in mdadm

2021-01-19 08:03 - SLindoMansilla

Status:	Rejected	Start date:	
Priority:	Normal	Due date:	
Assignee:	zluo	% Done:	0%
Category:	Bugs in existing tests	Estimated time:	0.00 hour
Target version:			
Difficulty:			

Description

Observation

From <https://openqa.suse.de/tests/5304351#step/mdadm/6>

```
# mdadm /dev/md1054 --fail /dev/loop41
mdadm: set /dev/loop41 faulty in /dev/md1054
      State : active, degraded
```

From <https://www.thegeekdiary.com/mdadm-command-shows-state-active-degraded/>

The degraded state will generally occur if actual physical drive is going down, a drive temporarily being not communicating properly
Or synchronization haven't worked after the replacement of the disk.

Reproducible

- Scenario sle-15-SP3-Online-ppc64le-extra_tests_textmode@ppc64le
- Fails since Build 124.5
- Current occurrence [127.1](#)
- Last good: [123.3](#)
- [latest](#)

History

#1 - 2021-04-30 08:54 - tjrinki_suse

- Subject changed from [qe-core] test fails in mdadm to [qe-core][sporadic] test fails in mdadm
- Status changed from New to Workable
- Start date deleted (2021-01-19)

#2 - 2021-05-04 13:50 - zluo

- Status changed from Workable to Rejected
- Assignee set to zluo

https://openqa.suse.de/tests/5898936#next_previous

looks good, no issue anymore.
