#### Description

### Observation

openQA test in scenario sle-12-SP3-Server-DVD-Incidents-Install-x86\_64-qam-incidentinstall@64bit fails in [update\\_install](#)

### Test suite description

Incident Installation TEST  
MAX\_JOB\_TIME=9000 due to long texlive update

### Reproducible

Fails since (at least) Build [:18008:pdsh](#) (current job)

### Expected result

Last good: [:18231:kiwi](#) (or more recent)

### Further details

Always latest result in this scenario: [latest](#)

The test case is incorrect:

'zypper -n in -l pdsh pdsh-machines pdsh-slurm\_18\_08 pdsh-genders pdsh-dshgroup pdsh-netgroup pdsh-slurm\_20\_02 pdsh-slurm' pdsh-slurm\_18\_08, pdsh-slurm\_20\_02 and pdsh-slurm cannot be installed together.

The version of pdsh-slurm needs to match the version of slurm!

Therefore, when installing slurm\_20\_02, pdsh-slurm\_20\_02 needs to be picked - likewise, for slurm\_18\_08, pick pdsh-slurm\_18\_08.

#### History

##### #1 - 2021-03-04 07:50 - tjrinki\_suse

- Subject changed from test fails in update\_install to [qe-core][qem] test fails in update\_install

- Start date deleted (2021-02-19)

##### #2 - 2021-03-05 11:10 - tjrinki\_suse

- Parent task set to #65666

##### #3 - 2021-04-08 07:18 - tjrinki\_suse

- Status changed from New to Workable

##### #4 - 2021-04-26 10:21 - zluo

- Status changed from Workable to In Progress

- Assignee set to zluo

take over to check this issue.

**#5 - 2021-04-29 14:01 - zluo**

- *Status changed from In Progress to Rejected*

I cannot reproduce this issue anymore. It looks also good on OSD since 2 months. I think the updated packages are so different and we have to rely on packages or dependency anyway which defined in package. We have still some issue for the test module, but they are different issues.

**#6 - 2021-05-04 09:13 - szarate**

- *Target version set to Ready*

**#7 - 2021-05-04 09:37 - szarate**

- *Target version changed from Ready to QE-Core: Ready*

**#8 - 2021-05-05 06:40 - eeich**

Before rejecting it I would have suggested to look what script has generated the command line:

```
zypper -n in -l pdsh pdsh-machines pdsh-slurm_18_08 pdsh-genders pdsh-dshgroup pdsh-netgroup pdsh-slurm_20_02 pdsh-slurm  
and what caused pdsh-slurm_18_08 and pdsh-slurm_20_02 to be combined together.
```

A version upgrade of Slurm components needs to follow a certain process otherwise zypper will throw error messages as seen.

I'm not satisfied that this ticket gets rejected with the explanation 'we cannot reproduce the error any more' as the zypper command like mentioned above is clearly wrong. So unless another change has fixed this, there is no reason to believe that this is really fixed.
