Target version:	future		
Description			
As a QE engineer, I would like to have an easy to understand, available logging for the tests where REST API is used. Currently we have very basic logging which is applied in case of failures. And there many things we can improve. After initial brainstorming session (see https://etherpad.nue.suse.com/p/LibyuiClient_Logging), we have identified multiple items we can act on in order to improve transparency of the execution and simplify investigation of failures.			
Subtasks:			
action # 89482: Improve post_fail_hooks logging for libyui REST API tests			Closed
action # 89485: Implement feature to use separate log file for REST API			Closed
action # 89488: Add timestamps to the screenshots being shown in openQA			New
