

openQA Project - action #89749

coordination # 80142 (Blocked): [saga][epic] Scale out: Redundant/load-balancing deployments of openQA, easy containers, containers on kubernetes

coordination # 89842 (New): [epic] Scalable and streamlined docker-compose based openQA setup

containers: Allow to the user to choose the source of images in the docker-compose

Target version:	future		
Difficulty:			

Description

Motivation

Now only the local build images can be used on the docker-compose. As a user would be nice to give me the option to choose without changing the docker-compose yaml

Acceptance Criteria

AC 1: The user can choose the images
AC 2: Create a test to check that local build images and remote images can be used

Suggestions

- Use docker-compose variables e.g. image: \${OPENQA_WEBUI_IMAGE}
- Add the default values to .env file
- See <https://github.com/os-autoinst/openQA/pull/3755>

History

#1 - 2021-03-09 16:02 - ilausuch

- Description updated

#2 - 2021-03-09 16:30 - cdywan

- Related to coordination #80142: [saga][epic] Scale out: Redundant/load-balancing deployments of openQA, easy containers, containers on kubernetes added

#3 - 2021-03-10 12:53 - okurz

- Related to deleted (coordination #80142: [saga][epic] Scale out: Redundant/load-balancing deployments of openQA, easy containers, containers on kubernetes)

#4 - 2021-03-10 12:54 - okurz

- Priority changed from Normal to Low

- Target version set to future

- Parent task set to #80142

Good idea. I created an over-spanning epic as direct parent hence removing the relation to the saga.

#5 - 2021-03-10 12:56 - okurz

- Parent task changed from #80142 to #89842
