#### Description

### Context

validate\_packages\_and\_patterns fails when the product is approaching the release phase, the reason for the failure is that there are some packages ([https://openqa.suse.de/tests/5646949#step/validate\\_packages\\_and\\_patterns/13](https://openqa.suse.de/tests/5646949#step/validate_packages_and_patterns/13)) that are available only during development phase

they test different conditions for the state of the repo/packages to ensure that stuff works well (I.E, we detect broken packages for instance iirc from what Sergio Lindo Mansilla mentioned)

For more context: <https://chat.suse.de/channel/testing?msg=DoL3qG9P4eMuDjrjR>

### Suggestions

When enabling, also remember to tackle the problem from the beginning, before next product starts development phase by moving away from BETA (and repurposing if needed) flag to PHASE=[alpha|beta|rc|gmc]
