Category: Bugs in existing tests	Estimated time: 0.00 hour
Target version: QE-Core: Ready	
Difficulty:	

Description

Observation

openQA test in scenario sle-15-SP2-Full-QR-ppc64le-RAID0@ppc64le-no-tmpfs fails in [raid_gpt](#)

This used to work earlier, now complains about "select at least two devices" so something has changed. Whether it's a test issue (this ticket) or product bug (to be filed if investigation shows that) is to be seen.

These steps look equal so I'm not sure why it fails:
fail:
https://openqa.suse.de/tests/latest?arch=ppc64le&distri=sle&flavor=Full-QR&machine=ppc64le-no-tmpfs&test=RAID0&version=15-S2#step/raid_gpt/96
pass: https://openqa.suse.de/tests/5446298#step/raid_gpt/96

Test suite description

Maintainer: slindomansilla, jrauch

Installation of RAID0 using expert partitioner

Reproducible

Fails since (at least) Build [383.6](#)

Expected result

Last good: [383.6](#) (or more recent)

Further details

Always latest result in this scenario: [latest](#)
