**Difficulty:**

### Description

**Observation**

Hello

seems like in this test we're still waiting for grub2 screen but we're already at entering luks password dialog. Perhaps the timeout for grub is not set properly.

openQA test in scenario opensuse-15.3-DVD-x86_64-upgrade_Loop_42.3_cryptlvm@uefi fails in

grub_test

### Test suite description

okurz: Replaced older HDD_1=opensuse-42.3-x86_64-Updates-20170217-1-cryptlvm@uefi.qcow2 which was not existing anymore by HDD_1=%DISTRI%-42.3-%ARCH%-GM-cryptlvm@%MACHINE%.qcow2 but only for this test suite. Do we need it for others as well?

### Reproducible

Fails since (at least) Build 74.1

### Expected result

Last good: 65.8 (or more recent)

### Further details

Always latest result in this scenario: latest
