containers: Configurable workdir location in docker-compose

2021-04-12 09:55 - ilausuch

Status:	Workable	Start date:	2021-04-12
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	Feature requests	Estimated time:	0.00 hour
Target version:	future		
Difficulty:			
Description			
Motivation			
Currently, the workdir is created in the containers/webui directory with two problems:			
<ul style="list-style-type: none">• This clutters the git directory. (The path is already in .gitignore, though.)• The directory is owned by root causing the tidy script to fail on permission errors.			
Acceptance criteria			
<ul style="list-style-type: none">• AC1: Use a different default directory or at least prevent the interference with the tidy script.• AC2: Allow to configure the workdir path, e.g. via an environment variable.• AC3: Document where files are stored by default and AC2.

- Subject changed from containers: Fix workdir location in docker-compose to containers: Configurable workdir location in docker-compose

- Description updated

- Status changed from New to Workable

I was asking [ilausuch](#) in chat, but repeating my point here for the record. AC2: Allow to configure the workdir path sounds like a feature request to me. And I'm not clear that the workdir as it is used now breaks anything. Hence I think the title of the ticket should reflect this better.

#6 - 2021-04-15 10:11 - ilausuch

Yes, it's a feature
