#8 - 2021-04-16 10:42 - mkittler

- Status changed from Feedback to In Progress

My fix only landed on OSD with today's deployment so I'm re-triggering the last limit_results_and_logs job now. It is currently still active. I hope it'll work because we've already received the filesystem alert as results have been piling up.

I'll also check which group has been configured with a retention period of infinity. Having such a configuration triggered the bug but regardless of the bug being fixed now it might be questionable to have such a configuration.

#9 - 2021-04-16 11:47 - mkittler

The job group https://openqa.suse.de/admin/job_templates/276 had no/infinite retention periods for results configured. I've just set it to match its parent group (see https://openqa.suse.de/admin/job_templates/276) as we can not keep the results around forever.

The cleanup is meanwhile still running but could already bring the results under the alert threshold.

#10 - 2021-04-16 15:27 - mkittler

- Status changed from In Progress to Resolved

The cleanup task succeeded again and we're still below the alert threshold.
