History

#1 - 2021-05-05 11:03 - tinita

One observation is that this job has no store_artifacts step like our other jobs. With this we could have seen when the rpm list became empty.

#2 - 2021-05-05 11:11 - okurz

- Priority changed from Normal to Urgent

thx

#3 - 2021-05-07 13:00 - okurz

- Status changed from New to Resolved

- Assignee set to okurz

andriinikitin helped. AFAIK he simply retrIGGERED the failed job. What that should have suddenly helped I don't know.

<https://app.circleci.com/pipelines/github/os-autoinst/openQA?branch=master> shows that the pipeline is ok again for some days. I don't think we have found a proper fix, just the workaround to retrigger. Would be good to improve for the future but as long as no one else has an idea I don't know what else to do than just to resolve the ticket.

#4 - 2021-05-07 15:00 - tinita

Merged PR to store artifacts: <https://github.com/os-autoinst/openQA/pull/3891>
