Category:	Bugs in existing tests	Estimated time:	0.00 hour
Target version:			
Difficulty:			

Description

Observation

Test is failing from since there is history. The poo linked to it was wrong.
I tried to create some needles (/dev/pmem4 and 5 selected) but did not help. Needs some more look into how the test work.

openQA test in scenario

sle-15-Server-DVD-SAP-Incidents-x86_64-qam-sles4sap_online_dvd_gnome_hana_nvdimmm@64bit-ipmi-nvdimmm fails in [partitioning_firstdisk](#)

Test suite description

The base test suite is used for job templates defined in YAML documents. It has no settings of its own.

Reproducible

Fails since (at least) Build [:16780:habootstrap-formula](#)

Expected result

Last good: (unknown) (or more recent)

Further details

Always latest result in this scenario: [latest](#)

History

#1 - 2021-06-18 11:38 - tjyrinki_suse
