<b>Description</b>			
<b>Motivation</b>			
Leap 15.3 will be released soon, people are already asking for it :)			

#### History

##### #1 - 2021-05-12 09:47 - okurz

- Assignee deleted (okurz)

##### #2 - 2021-05-13 03:08 - simotek

I'm happy to help with testing of this, I am already running 15.3 on the machine I plan to run openQA on

##### #3 - 2021-05-14 14:01 - mkittler

- Assignee set to mkittler

I assume this means enabling repositories on OBS and fixing all problems which come along.

##### #4 - 2021-05-14 14:34 - mkittler

- Status changed from New to In Progress

I've been adding <https://build.opensuse.org/project/show/devel:openQA:Leap:15.3> (for packages which are too old or missing in Leap 15.3) and enabled Leap 15.3 builds in <https://build.opensuse.org/project/show/devel:openQA>. Let's see whether there will be any build problems.

[simotek](#) This means you could install openQA under Leap 15.3 like it is described here (when everything has been built): [https://open.qa/docs/#\\_development\\_version\\_repository](https://open.qa/docs/#_development_version_repository)

##### #5 - 2021-05-17 09:12 - mkittler

- Status changed from In Progress to Feedback

Looks like everything builds as expected. (openQA:openQA-devel-test is unresolvable for ppc64le due to missing chromedriver but that was already the case for Leap 15.2.) So you can test it if you like. Not sure what's still missing.

##### #6 - 2021-05-17 22:05 - okurz

- Status changed from Feedback to Resolved

[https://build.opensuse.org/project/monitor/devel:openQA?arch\\_x86\\_64=1&defaults=0&repo\\_openSUSE\\_Leap\\_15\\_3=1&succeeded=1](https://build.opensuse.org/project/monitor/devel:openQA?arch_x86_64=1&defaults=0&repo_openSUSE_Leap_15_3=1&succeeded=1) looks great! Including all the test results that this brings so I am confident that we have everything in place we need.
