Category:	Estimated time: 0.00 hour
Target version: Current	

Description

lvm-thin-provisioning is scheduled right now only in SLE15 -> YaST and Maintenance: Test Repo -> Maintenance SLE 15 SP3 Updates

It would be nice to have it also scheduled in the rest of maintenance runs. From a quick VR though in SLE 15SP2, the job gets stuck in setup_libyui.pm (<https://openqa.suse.de/tests/6211107#>) for a long time.

The error message, when accessing the machine is : An error occurred during the installation, which seems to be related to [\[poo#93222\]](#)

Acceptance criteria

- **AC1** Fix the issue occurring in setup_libyui.pm
- **AC2** Verify that lvm-thin-provisioning works in all SLE Maintenance versions (12-SP2 till 15-SP2)
- **AC3** Schedule lvm-thin-provisioning in schedule/qam/1x-SPx/lvm_thin_provisioning.yaml

History

#1 - 2021-06-09 08:40 - punkioudi

- Description updated

#2 - 2021-06-09 08:47 - punkioudi

- Project changed from openQA Tests to qe-yast

#3 - 2021-06-10 06:42 - tjyrinki_suse

- Start date deleted (2021-06-09)

AC1 is being fixed via <https://progress.opensuse.org/issues/93757> at least for 15-SP2, ie removing YAML from test suite definition and using on 15-SP3 only.

QE Yast can continue with this ticket otherwise when suitable.

#4 - 2021-06-15 14:22 - oorlov

- Subject changed from [qem][qe-yast] Schedule lvm-thin-provisioning in maintenance runs to Schedule lvm-thin-provisioning in maintenance runs
- Target version set to Current

#5 - 2021-06-15 14:22 - oorlov

- Parent task changed from #91193 to #94045
