

openQA Tests - action #95036

[Leap 15.3 Updates] Jobs are being restarted often, not allowing the previous jobs to finish

2021-07-02 13:33 - punkioudi

Status:	Resolved	Start date:	2021-07-02
Priority:	Urgent	Due date:	
Assignee:	punkioudi	% Done:	0%
Category:		Estimated time:	0.00 hour
Target version:	QE-Core: Ready		
Difficulty:			
Description			
It has been observed that the job group [here] re-starts the runs often during the day, which prevents the previous runs from finishing. This behavior can be seen in the screenshot below.

- Status changed from New to Resolved

- Assignee set to punkioudi

The kde job was unscheduled, because has been failed in all runs, but in the repos definitions in openSUSE-release-tools, it was still mentioned in a condition.

As a result, the aforementioned behavior was happening.

Kde job is again scheduled and this issue is not appearing anymore.
