#### Description

Currently the module autoyast/prepare\_profile.pm is parsing only one autoyast profile file, as defined by AUTOYAST variable. The functionality does not cover the case where the profile is created by rules and classes. In this scenario AUTOYAST variable is pointing to a directory that contains a variety of xml files. For example:

```
/profile_dir/profile_a.xml  
/profile_dir/profile_b.xml  
/profile_dir/classes/class1/file1.xml  
/profile_dir/classes/class2/file2.xml
```

All these files might contain values that need expansion.

The uploading of the files should follow the same structure as before parsing. New AUTOYAST variable value should point to directory that contains all files (even those that didn't need any expansion). For example AUTOYAST: "

[http://10.0.2.2:20033/Cva0\\_dNqLoV3\\_jFI/files/autoyast\\_sle15/rules\\_and\\_classes/](http://10.0.2.2:20033/Cva0_dNqLoV3_jFI/files/autoyast_sle15/rules_and_classes/)"

For more information, check parent ticket.

The goal of this ticket is to add the extra functionality to prepare\_profile module (or if it is more practical, to create a new module for the particular scenario). This functionality will be used for x86\_64.
