Target version:	future		
Difficulty:			
Description			
Motivation			
As a squad member with responsibility areas defined by a field Maintainer: my-team@suse.de in a test suite (or job template) description I would like to filter by a search term searching the test suite description on /tests/overview to only see scenarios which list my team in the description			
Acceptance criteria			
<ul style="list-style-type: none">AC1: /tests/overview can be configured to show only test results matching a specified search term in test suite description			
Further details			
If we want each team to "only look at their scenarios" then we likely want to have an alert if there is any test suite or job template without defined maintainer. At least it should be possible to search for test suites without maintainer this way, e.g. regex search using negative look-ahead

- Target version changed from Ready to future

#4 - 2021-09-24 12:22 - okurz

I understood that this feature could still be useful but for less teams. Either teams have already setup job groups if they mostly own scenarios or they work on a per-module basis. This is why I am moving this ticket from the epic that is in the current backlog to one outside.
