

openQA Project - action #97454

Decide and implement predefined tags for the commit message checker

2021-08-24 08:00 - VANASTASIADIS

Status: New	Start date: 2021-08-24
Priority: Normal	Due date:
Assignee:	% Done: 0%
Category: Feature requests	Estimated time: 0.00 hour
Target version: future	
Difficulty:	

Description

User story

When a user constructs a commit message, there should be a predefined list of accepted tags that can be used. The use of tags provides clarity about the domain the pull request touches upon, and users should not be free to put arbitrary tags there.

Acceptance criteria

- **AC1:** the tag list has been decided and agreed upon
- **AC2:** the tag list is implemented in the commit message checker and merged

Tasks

- propose useful tags (better here, in written form)
- if needed, decide the final list in a meeting (daily or weekly should be fine, no dedicated call needed)
- implement what is decided

valid idea but please not keep it in the backlog right now. We are limited in capacity. In the meantime we can collect ideas and opinions here anyway.
