Description

User story

Instead of manually accessing the custom queries defined in <https://progress.opensuse.org/projects/qa/wiki/#Target-numbers-or-guideline-should-be-in-priorities>, it would be nice to have automatic checks for those in a gh actions workflow.

Acceptance criteria

- **AC1:** A scheduled Github Actions workflow exists that fails when the target numbers for any one of the defined queries are not met
- **AC2:** Consider if any further action would be desired (like an alert in case of target numbers not being met)

Tasks

- Create a gh action workflow with individual checks for each query in <https://progress.opensuse.org/projects/qa/wiki/#Target-numbers-or-guideline-should-be-in-priorities>
- Evaluate if there's a need for further actions

Further details

A POC exists here: <https://github.com/BillAnastasiadis/qa-tools-backlog-assistant/actions>

History

#1 - 2021-08-27 10:28 - VANASTASIADIS

- Parent task set to #69310

#2 - 2021-08-31 12:24 - VANASTASIADIS

- Status changed from New to Feedback

- Target version changed from future to Ready

Feature implemented at <https://github.com/os-autoinst/qa-tools-backlog-assistant>

#3 - 2021-08-31 19:11 - VANASTASIADIS

- Status changed from Feedback to Resolved

Feature is working as expected in <https://github.com/os-autoinst/qa-tools-backlog-assistant>. Resolving the ticket.

#4 - 2021-08-31 19:17 - okurz

- Status changed from Resolved to Feedback

- Assignee set to VANASTASIADIS

Does the action fail if one of the alerts trigger?

#5 - 2021-09-02 12:12 - VANASTASIADIS

Good question: The action does fail if any of the alerts trigger, but not before running all of the checks first - so that if more than one queries fail, they are all shown and not only the first one.

#6 - 2021-09-21 10:40 - VANASTASIADIS

- *Status changed from Feedback to Resolved*

I think it's safe to say that this ticket is now resolved. Further fixes and improvements can be discussed in <https://progress.opensuse.org/issues/98186>
