Description

Observation

From https://suse.slack.com/archives/C02CANHLANP/p1631806554345200?thread_ts=1631806554.345200&cid=C02CANHLANP
Unresolvables in
https://build.opensuse.org/project/monitor/devel:openQA?arch_x86_64=1&defaults=0&repo_openSUSE_Leap_15_3=1&unresolvable=1

Acceptance criteria

- **AC1**: No more unresolvables in 15.3 than in 15.2 or Tumbleweed

Suggestions

- Look on
  https://build.opensuse.org/project/monitor/devel:openQA?arch_x86_64=1&defaults=0&repo_openSUSE_Leap_15_3=1&unresolvable=1 for unresolvables. Right now for the package of openQA it says "have choice for rubygem(ruby:2.5.0:rb-fsevent) >= 0.9.4 needed by ruby2.5-rubygem-sass-listen: ruby2.5-rubygem-rb-fsevent ruby2.5-rubygem-rb-fsevent-0.11, have choice for rubygem(ruby:2.5.0:rb-fsevent:0) >= 0.9 needed by ruby2.5-rubygem-sass-listen: ruby2.5-rubygem-rb-fsevent ruby2.5-rubygem-rb-fsevent-0.11" . Maybe something needs to be added in the project config?

So I see you want to do the linkpac for perl-DBD-SQLite and ruby packages yourself.

I did not plan this. I don't even know what is the relation to sqlite. I asked in IRC but no response. Unassigning. You can try your way :)

added prefer to project config .. Leap15.3 has choce from two packages to satisfy given requires so OBS cand decide which use

#9 - 2021-09-24 07:54 - pluskalm

FYI we have #discuss-packaging channel in slack where you can ask - and people are usually pretty responsive

I just wanted to write that I did osc linkpac openSUSE:Factory perl-DBD-SQlite devel:openQA:Leap:15.3 to avoid the unresolvable package which was still present in our *sub project* for Leap 15.3 (
https://build.opensuse.org/project/monitor/devel:openQA:Leap:15.3?arch_x86_64=1&repo_openSUSE_Leap_15_3=1&unresolvable=1). Looks like the problems regarding the ruby packages are gone as well so now the ticket should be actually resolved.
