coordination # 93668 (New): [epic] Redesign Installation test modules

Implement manual intervention with client libyui-rest-api

2021-09-21 06:39 - JERiveraMoya

Target version:	Current		

Description

We can unschedule test module `resolve_dependency_issues` in YaST group due to dependency issues should not reach the GA product.

In staging, of course are still visible, for example: https://openqa.suse.de/tests/7642678#step/resolve_dependency_issues/3 (please, see note below).

Current logic does the following:

(1) Check in Installation Settings the message of needed manual intervention, click on Software link and shows dialog with name of the package conflict and the options for conflicts resolution.

(2) Via settings, choose workaround the dependency or break it.

Additional to unschedule this module in YaST group, for staging we can develop (1) using client `libyui-rest-api`, so we check the red message in Installation Settings and if detected, navigate to Software and view the specific issue, so we don't miss this logic which helps reviewing staging (from the other screen is not visible exact problem).

Note: we need some recent run in staging to work with this ticket where this problem is visible

History

#1 - 2021-09-21 06:39 - JERiveraMoya

- Tracker changed from coordination to action
